# Swiftpro®

IP Printer

Print ID Cards from Almost Any Internet-Connected Device

With Swiftpro's new IP printer, printing your ID cards has never been easier and simpler. With simple plug-and-play technology, the Swiftpro IP printer utilizes a mini-PC to allow you to wirelessly connect to the internet, eliminating the need for Ethernet or USB cable connections to your device. There is typically no driver installation needed either. Print from virtually any smart device, including phones, tablets, and, of course, PCs. This gives you the flexibility to relocate your printer virtually anywhere you have electrical power and an internet connection.

What Can It Do?

- About as close to "plug and play" as you can get
  - Unbox printer, load supplies, power on printer and PC
  - While the printer warms up, the PC connects to the internet and any designated web services
- Print (and enroll) from any device that:
  - Has an internet connection
  - Can run your favorite ID software
  - Has valid login credentials
- Can also read pre-encoded smart card data and encode chips (depending on the application software)

Typical Mini PC Specs
Windows 11 Pro
Intel 11th Gen N5095 Celeron CPU
Intel UHD Graphics & Dual HDMI
8 GB DDR4 RAM (expandable to 16)
128 GB M.2 SSD
